India: Steering the Asian Success Story

AUTOMATION 2011™

20 21 22 23 September 2011, NSE, Goregaon, Mumbai, INDIA

✓ AUTOMATION 2011™

Exhibition Focus

Factory Automation
Process Automation & Control Systems
Field Instrumentation & Smart Sensors
Robotics & Drives
Bus Technologies
Software Solutions
Wireless Technology
Building Automation
Hydraulics & Pneumatics
Automation in Renewable Energy
Safety & Security Systems
Pumps & Valves

India is in a tearing hurry to grab the front row seat kept for fast developing Asian countries. And partnering India in this endeavor are new technologies and innovations that have been absorbed in every aspect of manufacturing and service industry. This enthusiastic welcome extended to new automation technologies by India has already started reaping rich dividends:

- India ranks among the top 12 manufacturing nations providing value additions.
- India ranks fourth in electrical machinery and fifth in apparatus.
- It's placed twelfth in machinery, equipment and motor vehicles.
- Manufacturing is contributing around 15 per cent of GDP of the country.

India is today increasingly being looked upon, even sought, by its neighbors to lead the charge in Asia's growth. AUTOMATION Exhibitions over the years have mirrored this fast changing trend and the 6th edition, AUTOMATION 2011 promises to take one step even further. Already, global majors from US, Australia and Europe having their pavilions on display in 2010 have re-confirmed their presence for the 2011 event considering an ever increasing international audience the exhibition taps into. The exhibition will also be host to global launches of cutting edge innovations from various companies across the world. Add to it, it also promises to venture into hitherto unexplored industries. To sum it up, it will cater equally to the passionate and connoisseur alike. Make sure your brand stands where the global players are.
